 - Better readability in sunlight & in low light
 - Full 640x480 VGA Display
 - 40% More Pixels
 - 25% larger viewing area
 - New Bezel and Glass
- Dedicated directional Map Panning Keys
 - Makes it easy to move to anywhere on the map
 - Especially useful for viewing the weather at your destination
- Exclusive QuickPan™ function
 - Easily toggles between panned-to position and present position
 - Ideal for monitoring weather at destination throughout your flight
- Upgrade and trade-in programs available

UPGRADE YOUR EX500 → EX600

STARTING AT \$6,495

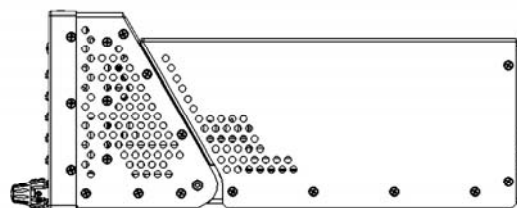

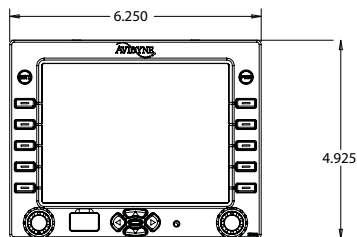

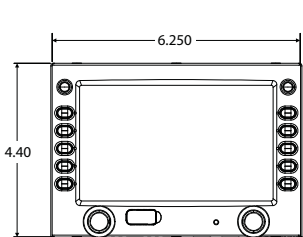

The biggest safety and utility enhancement of the EX600 is its new QuickPan function which makes it easy to view weather at your present position and at your destination with a single button push.

QuickPan Button

Avidyne's FlySafe discounts make upgrading to the EX600 a great time to consider additional safety sensors including Datalink Weather, Color Lighting and Traffic Advisory Systems.

While all electrical wiring is identical, the EX600 is a little more than half an inch taller than the EX500 and thus will require some minimal panel work and changing of the mounting tray in order to accommodate the upgrade.

Avionics installations require special skills and test equipment. Avidyne's limited warranty is valid only for equipment installed by an Authorized Avidyne Distributor. Avidyne reserves the right to make changes to product specifications and design features without notice.

Some products may require additional hardware for full feature capability.
